Task 2 Masking Your Link.

After creating your phishing page, obviously you will not send the link provided by the tool as it is suspicious.

Answer the questions below

Copy the link provided by the tool.

No answer needed

✓ Correct Answer

?

Go to <https://bitly.com>

No answer needed

✓ Correct Answer

Paste the url you copied and shorten it.

No answer needed

✓ Correct Answer

COPY THE NEW LINK & SEND IT TO YOUR TARGET.

(Use it ONLY for Educational Purposes.)

✓ Correct Answer

Task 3 Creating Gmail Phishing Page !

^

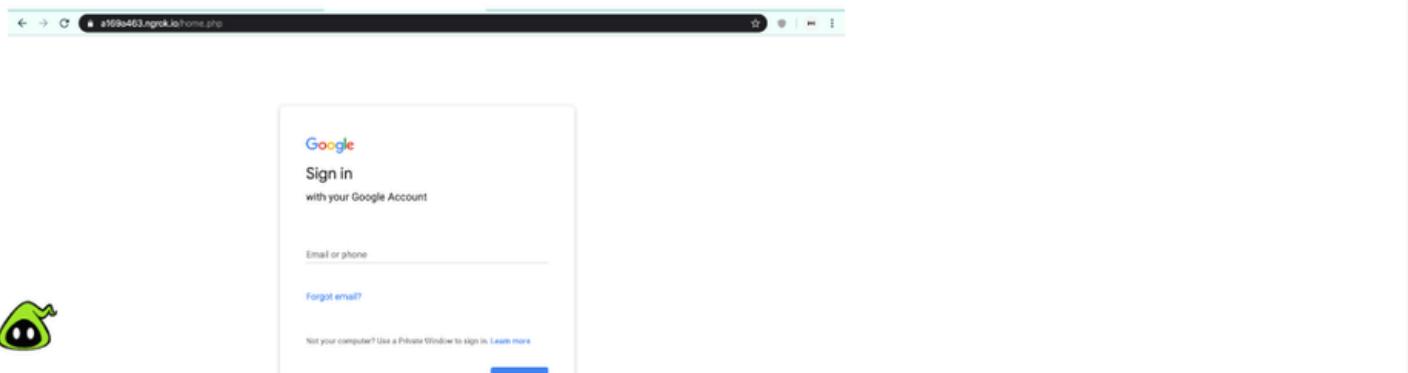

It is excellent to understand what a **phishing** page looks like to help secure yourself from leaking your credentials by accident.

In cyber-security the weakest link is humans.

A wise man said, to help secure yourself, is to understand how an attacker might approach to you.

This task will help you understand the *difference* between a **legit/official** page and **phishing** page even if it contains a **HTTPS**. Also, this task will help you create a **Gmail** phishing page.

Answer the questions below

The screenshot shows a browser window with a Google sign-in page. The URL bar shows '10.0.4.63.ngrok.io/home/sign'. The page has the Google logo and a 'Sign in with your Google Account' button. Below it is a 'Email or phone' input field and a 'Forgot email?' link. At the bottom, there's a note about using a private window and a 'Learn more' link. A green alien icon is visible in the top left corner of the browser area.

The terminal window displays the following text:

```
Victim Public IP: 37.131.54.10
User-Agent: Mozilla/5.0 (Macintosh; Intel Mac OS X 10_15_2) AppleWebKit/537.36 (KHTML, like Gecko)
Chrome/79.0.3945.130 Safari/537.36
Current logged in user: root
[ CREDENTIALS FOUND ]:
[EMAIL: TryHackMeTest [PASS: Test1]
```

A green alien icon is visible in the top left corner of the terminal window.
